

(a) robot 0's guide: a geometric RRT path, shortcut, then smoothed (blur 0.96 m)

(b) the first proposal is refuted; the clause $\neg x_{0,c_0} \vee \neg x_{1,c_1}$ is learned

(c) the core blames $\{0,1\}$: discs on the contested points, both guides resampled around them

(d) verified plan: 353 steps = 35.3 s after bisection
