

(a) robot 0: RRT path, shortcut, and the trajectory the optimiser returns from it

(b) the first proposal is refuted; the clause $\neg x_{0,c_0} \vee \neg x_{1,c_1}$ is learned

(c) the core blames $\{0,1\}$: each is re-solved from before the contact, keeping clear of the other

(d) verified plan: 512 steps = 51.2 s after bisection
